## Domestic Market View

### Markets likely to make mildly positive start

Indian markets ended a choppy session slightly higher on Tuesday even as global markets succumbed to selloff amid jitters about US - Chinese trade tensions and mounting public scrutiny of technology companies. Today, the markets are likely to open slightly in green on Wednesday. Traders will be taking some encouragement with Finance Minister Arun Jaitley's statement that direct tax collection has grown by 18 per cent to cross Rs 10.02 trillion in the financial year ended on March 31, 2018. He said demonetisation and GST implementation have resulted in higher formalisation of the economy which is evident from additional 10 million IT returns being filed in the previous financial year. However, there will be some concern on report that the Reserve Bank of India (RBI) is unlikely to yield to the India Inc's pressure for a benign monetary policy stance by keeping policy rates unchanged in its first monetary policy review of 2018-19 to be announced on Thursday against the backdrop of hardening global crude oil prices. There will be buzz in sugar related stocks on report that sugar output increased 49 per cent to 28.18 million tonne (MT) so far in 2017-18 marketing year, but mills are unable to make cane payment to growers owing to low prices. Stocks related to tea sector too will be buzzing on a private report that Profit margins for bulk tea producers, particularly in north India, is likely to improve in the just-concluded financial year on firm price trends from August 2017 to January 2018.

## Domestic Market Overview

### Benchmarks end in green on growth in eight core sectors, higher direct tax collection

Extending previous session's gains, Indian equity benchmarks ended the Tuesday's trade with a gain of one third of a percent. Markets started the session on cautious note and entered into red terrain in morning deals with escalating trade tensions between the US and China. Investors also remained on sidelines ahead to the Reserve Bank of India's (RBI) policy decision on April 5 for directional cues. The central bank is expected to maintain status quo on rates despite increased risks to inflation posed by rising oil prices and a hike in minimum support price (MSP) announced in the Budget 2018. Traders also remained concerned with ICRA's report that more Indian companies are likely to default on their borrowings in the fiscal year that started in April compared with the previous year on higher interest costs and a deterioration in business conditions. Adding to the pessimism, India's manufacturing sector activity expanded at its slowest pace in the month of March to fall at 5-month low. The seasonally adjusted Nikkei India Manufacturing Purchasing Managers' Index (PMI) - a composite single-figure indicator of manufacturing performance - slowed down to 51.0 in March from 52.1 in February.

However, markets took U-turn and started paring losses to enter into green terrain in last leg of trade with traders taking support from report that the government's revenue collection during fiscal year 2017-18 gone up by 17.1% at Rs 9.95 lakh crore, supported by the addition of one crore new assesseees who have started filing income tax returns. Traders also took some solace with report that a steep rise in output of cement and fertilisers pushed up the growth of the core sector to 5.3% in February even as refinery products, electricity, coal, and natural gas production made the output of the infrastructure industries grow slower than 6.1% in January.

Rating agency Crisil warned that the ongoing probes into the frauds and allegations of improprieties against bankers will dent credit growth in the new fiscal year, even though the banks will see their dud assets piles peaking. On the sectoral front, banking stocks edged higher as the Reserve Bank of India allowed banks to spread their bond trading losses, a change that is likely to boost profitability of lenders as well as spur a rally in stock and bond markets. Under the change, lenders can spread bond-trading losses incurred in the December 2017 and March 2018 quarters equally over four quarters. This will come as a major reprieve to the public sector banks, which have been hard hit by trading losses from a spike in bond yields over recent months.

## Global Market Overview

### Asian markets close mostly in red on Tuesday

Asian stocks closed mostly lower on Tuesday and safe-haven assets such as gold and the yen rose as renewed trade tensions, a sharp fall in crude oil prices and another sell-off in US technology stocks rattled investors. Chinese shares ended lower on concerns that the Chinese retaliatory tariffs could dampen market confidence and hurt economic growth. Further, Japanese shares closed lower, dragged down by exporters and technology stocks. Though, Hong Kong stocks reversed earlier losses and ended higher, led by gains in consumer goods makers, although caution prevailed amid escalating trade tensions after Beijing unveiled retaliatory trade measures against the United States.

### US markets closed higher following a volatile session

The US markets closed higher on Tuesday, following a volatile session that saw major indices fluctuate widely as investors digested a sharp move lower in the previous session and gauged the likelihood of both trade risk and further weakness in technology names. Volatility is expected to remain elevated, and President Donald Trump is a particular focus for the equity market, with investors wary of any trade actions he might announce - particularly after China retaliated to US tariffs with protectionist measures of its own. Fed Governor Lael Brainard said that high asset prices and growing economic pressure from US fiscal stimulus mean financial markets may be particularly vulnerable to an unexpected shock, warning that the central bank could respond with stronger requirements on banks as needed. Lael Brainard added that valuations seem stretched and cyclical pressures are building. In such circumstances asset prices might be particularly susceptible to an unexpected development that accentuates downside risks to the macroeconomic outlook, like concerns about high inflation or uncertainty about US policy.

## Economy

### ➤ **Manufacturing PMI expands at slower pace; falls to 5-month low of 51 in March**

Amid softer expansion in output and new orders, India's manufacturing sector activity expanded at its slowest pace in the month of March to fall at 5-month low. As per the survey report, the seasonally adjusted Nikkei India Manufacturing Purchasing Managers' Index (PMI) - a composite single-figure indicator of manufacturing performance - slowed down to 51.0 in March from 52.1 in February. However, the reading remained above the watershed 50 mark indicating expansion for the eighth consecutive month.

According to the report, though the output rose to continue expansion rally for eighth successive month with growth in new orders and favourable demand conditions, rate of expansion was modest and the weakest since October, in March. Further, growth was reported across all three broad market groups and consumption goods outperformed the other two market groups. The survey report found that new business placed at manufacturing companies rose for the fifth consecutive month during March but at the weakest pace in the current sequence.

Besides, the inflationary pressures eased in the reported month, as input costs rose at the softer pace and one that was below the series trend, while output charge inflation was marginal and the weakest in the current sequence. However, payroll numbers declined for the first time in eight months, amid reports of spare operating capacity.

### ➤ **Direct tax collection jumps 17.1% to Rs 9.95 lakh crore in FY18**

The government's revenue collection during fiscal year 2017-18 has gone up by 17.1 percent at Rs 9.95 lakh crore, supported by the addition of one crore new assesseees who have started filing income tax returns. According to the Ministry of Finance, the net Direct Tax collections represent 101.5% of the Budget Estimates (Rs 9.8 lakh crore) and 99% of the Revised Estimates (Rs 10.05 lakh crore) of Direct Taxes for FY 2017-18.

The Ministry also indicated that nearly 6.84 crore income tax returns (ITRs) were filed in FY18 against 5.43 crore in FY17, registering a growth of 26 percent. It noted that before adjusting for refunds, gross collections have increased by 13 percent to Rs 11.44 lakh crore in FY 2017-18. Further, the data showed that refunds amounting to Rs 1.49 lakh crore have been issued during 2017-18. It added that net corporate tax recorded a growth of 17.1% while net personal income tax (including STT) recorded a growth of 18.9%.

The data highlighted that during FY18, the number of new ITR filers has also increased to 99.49 lakh as compared to 85.51 lakh new ITR filers added during FY17, which translates into a growth of 16.3 percent. It pointed out that the increase in total returns filed and new returns filed during FY18 is a result of sustained efforts made by the Income Tax Department in following up with potential non-filers through email, SMS, statutory notices, outreach programmes, etc. as well as through structural changes made in law and the Government's emphasis on widening of tax net.
